

SUBJECT: MATHEMATICS HIGH SCHOOL

Cliffside Park Public Schools

GRADE: 11

BOE APPROVAL: August 2018

Cliffside Park Public Schools

COURSE OF STUDY UNIT PLANNING GUIDE FOR: Algebra 2 Unit 4

Grade Level:
11th

Cliffside Park School District
Cliffside Park, NJ 07010
www.cliffsidepark.edu

Course Overview:

The Algebra 2 course explores families of functions which include linear, quadratic, exponential, logarithmic, radical and rational. The course examines these functions in various forms including algebraically and graphically. Students explore key concepts involving operations on these types of functions and different graphical representation using both technology and sketches by hand. Trigonometric functions are also explored and investigated using r models and the unit circle. Probability, data analysis, and statistics are also explored to create inferences and justify conclusions.

Overview of Units:

1. Linear Function and Quadratic Functions
2. Polynomial Functions
3. Rational Exponents, Rational Functions & Exponential Growth and Decay Functions
4. Periodic Models, Making Inference, Justifying Conclusion and Conditional Probability

Mathematics: Algebra 2

Unit 3 Algebra 2

Unit Name: Periodic Models, Making Inference, Justifying Conclusion and Conditional Probability

Primary Resource: Big Ideas Algebra 2 Common Core Edition 2016 and Associated Online Resources;

Duration: Approximately 8 weeks

WEEK 31

Essential Question: How can you find a trigonometric function of an acute angle θ ?

NJSLS Standards	Concepts <i>What student will know.</i>	Skills <i>What students will be able to do.</i>	Activities	Assessments and Checks for Understanding
<p>F.TF.A.1 - Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle</p> <p>F.TF.A.2 - Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle.</p> <p>F.TF.B.5 - Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline.</p>	<p>Lesson Vocabulary:</p> <p>Sine, cosine, tangent, cosecant, secant, cotangent</p> <p>Learning Goals:</p> <p>89. To evaluate trigonometric functions of acute angles.</p> <p>90. To find unknown side lengths and angle measurements of right triangles.</p>	<ul style="list-style-type: none"> • Use and apply vocabulary terms in context. • To draw angles in standard position • To find coterminal angles • To convert between degrees and radians • To use radian measure to solve real-life problems. 	<ul style="list-style-type: none"> • Explorations 1 and 2 p 461 Trigonometric functions of special angles and Exploring Trig Identities • Introduce vocabulary • Core Concept p. 462, 463 • Assignment guide p 466 TE 	<p>Formative:</p> <p>Analyzing Student classwork Strategic Questioning Error Analysis, p 466 Think Alouds Think-pair -Share Monitoring Progress questions 5-82 p.466 Exit Slips Do Nows Leveled Homework p. 466 TE Mini assessments p. 468 TE Quizzes</p> <p>Summative:</p> <p>Topic Tests Projects</p> <p>Benchmark Tests:</p>

BOE APPROVAL: August 2018

<p>F.TF.C.8 -Prove the Pythagorean identity $\sin^2(\theta) + \cos^2(\theta) = 1$ and use it to find $\sin(\theta)$, $\cos(\theta)$, or $\tan(\theta)$ given $\sin(\theta)$, $\cos(\theta)$, or $\tan(\theta)$ and the quadrant of the angle.</p> <p>MP.1 Make sense of problems and persevere in solving them.</p> <p>MP.2 Reason abstractly and quantitatively.</p> <p>MP.3 Construct viable arguments & critique the reasoning of others.</p> <p>MP.4 Model with mathematics</p> <p>MP.5 Use appropriate tools strategically.</p> <p>MP.6 Attend to precision.</p> <p>MP.7 Look for and make use of structure.</p> <p>MP.8 Look for and express regularity in repeated reasoning.</p>	<p>91. To use trigonometric functions to solve real-life problems.</p>			<p>Approximately every 5-6 weeks.</p> <p>Alternative: Use dynamic assessment and investigations on online platform.</p> <p>Mini assessments on specific concepts</p> <p>Questioning Journal responses</p> <p>Illustrations, computer projects, oral response, creative presentations or demonstration, etc</p> <p>Performance Assessment Tasks</p>

Interdisciplinary Connections:

NJSLS-ELA

RST.11-12.3 Follow precisely a complex multistep procedure when carrying out experiments, taking measurements, or performing technical tasks; analyze the specific results based on explanations in the text.

RST.11-12.4 Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 11-12 texts and topics.

RST.11-12.9 Synthesize information from a range of sources (e.g., texts, experiments, simulations) into a coherent understanding of a process, phenomenon, or concept, resolving conflicting information when possible.

RST.11-12.10 By the end of grade 12, read and comprehend science/technical texts in the grades 11-CCR text complexity band independently and proficiently.

W.11-12.1 Write arguments to support claims in an analysis of substantive topics or texts, using valid reasoning and relevant and sufficient evidence.

W.11-12.2.D Use precise language, domain-specific vocabulary, and techniques such as metaphor, simile, and analogy to manage the complexity of the topic.

NJSLS-S: Physics

HS-PS3-2 Energy Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motions of particles (objects) and energy associated with the relative positions of particles (objects)

BOE APPROVAL: August 2018

HS-PS3-5.5 Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction

HS-PS2-4 : Forces and Motions Use mathematical representations of Newton’s Law of Gravitation and Coulomb’s Law to describe and predict the gravitational and electrostatic forces between objects

NGSS Practices:

Analyzing and Interpreting Data: Analyze data using tools, technologies, and/or models (e.g., computational, mathematical) in order to make valid and reliable scientific claims or determine an optimal design solution.

Developing and Using Models: Develop or use a model based on evidence to illustrate the relationships between systems or between components of a system.

Engaging in Argument from Evidence: Make and defend a claim based on evidence about the natural world that reflects scientific knowledge, and student-generated evidence.

NJSLS- Biology

HS-LS3 Heredity: Inheritance and Variation of Traits

HS-LS3-2. Make and defend a claim based on evidence that inheritable genetic variations may result from (1) new genetic combinations through meiosis, (2) viable errors occurring during replication, and/or (3) mutations caused by environmental factors.

NJSLS-Technology:

Students will use Desmos, GeoGebra or the TI-84 calculator to assist in graphing and analyzing these equations. They will discuss their findings with the instructor and their classmates. Students will participate in activities on Google Classroom and other online resources, Desmos, GeoGebra, IXL

8.1.12.A.3 Collaborate in online courses, learning communities, social networks or virtual worlds to discuss a resolution to a problem or issue.

8.1.12.A.4 Construct a spreadsheet workbook with multiple worksheets, rename tabs to reflect the data on the worksheet, and use mathematical or logical functions, charts and data from all the worksheets to convey the results.

Career Ready Practices:

CRP2. Apply appropriate academic and technical skills.

CRP4. Communicate clearly and effectively and with reason

CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.

CRP11. Use technology to enhance productivity

21st Century Life and Career:

9.1.12.B.6 Design and utilize a simulated budget to monitor progress of financial needs.

9.1.12.C.2 Compare and compute interest and compound interest and develop an amortization table using business tools.

9.1.12.C.3 Compute and assess the accumulating effect of interest paid over time when using a variety of sources of credit.

WEEK 39 Final Project/Exam

Integrated Differentiation/Accommodations/Modifications for Algebra 2 Unit 4 (Alternate Modes of Instruction and Support)		
Modifications to Support Gifted and Talented Students	Modifications to Support English Language Learners	Modifications to Support Our Learners (Students with IEPs/504s and At-Risk Learners)
<p>See specific modifications in each lesson.</p> <p>Integrate Higher Order Thinking Skills (HOTS) through questioning and extension projects specific to linear equations, inequalities and functions</p> <p>Provide menu of challenge activities for when the child finishes the lesson early (integrate technology when possible).</p> <p>College/Career Readiness skill enhancement - G & T students can research professions related to the Algebra.</p> <p>Have the student teach the lesson - peer tutoring (research-based strategy) Accelerate pace for students who are advanced in concepts.</p> <p>Use inquiry-based, discovery learning approaches that emphasize open-ended problems with multiple solutions or multiple paths to solutions.</p> <p>Allow students to design their own ways to find the answers to complex questions.</p>	<p>See specific modifications in each lesson.</p> <p>Concept/Idea Map - teacher models note-taking on trigonometric functions, graphing sine and cosine functions, trigonometric identities, computing probabilities, using two-way tables, permutations and combinations and the binomial theorem.</p> <p>Contextualize language See each lesson for specific vocabulary</p> <p>Visuals and illustrations to be used for performing operations on functions, inverse functions, graphing rational functions and other concrete terms.</p> <p>Word/picture bank available for students' reference in classroom, online and in their textbooks.</p> <p>Wait Time Two - extend basic "Wait Time" - after the 1st student responds to a question, the teacher waits an additional 5 - 7 seconds before calling on another student to ask a question about this unit.</p> <p>Native Language Supports (peer, online assistive technology, translation device, bilingual dictionary)</p> <p>Teach the text backward - frontload the concepts and vocabulary needed for learning</p>	<p>See specific modifications in each lesson.</p> <p>Review student individual educational plan and/or 504 plan for instructional, assessment, and environmental supports.</p> <p>Allow student to use calculator to solve problems involving graphing.</p> <p>Teach students how to check the accuracy of the solution that was derived from use of the graphing calculator.</p> <p>Utilize manipulatives and/or visuals within instructional presentation of graphing functions.</p> <p>Teach students how to check the accuracy of the solution that was derived from use of the calculator or other method.</p> <p>Provide graph paper to aid in aligning performing arithmetic operations on functions.</p> <p>Utilize graphic organizer or partially completed template for students to solve word problems and other complex problems in the unit.</p> <p>Provide study guides that are partially completed by teacher, allowing the student to fill in missing information during instruction in order to aid in obtaining information pertaining to modeling functions and graphs of functions.</p>

BOE APPROVAL: August 2018

	<p>the material and activating prior knowledge vocabulary, see specific lesson for vocabulary list.</p> <p>Use a word square to teach target academic vocabulary for this unit.</p> <p>Support comprehension of unknown vocabulary, by providing examples of Note-taking, highlighting, underlining, etc.</p> <p>Students should be given copies of grade level material or text so they can highlight or underline pertinent information.</p> <p>Provide students with a sample problem or list of steps or procedures for multi-step solutions to problems. Allow student to reference these procedures when solving independently.</p>	<p>Utilize visual aids such as charts or graphs connected to trigonometric functions, graphing sine and cosine functions, trigonometric identities, computing probabilities, using two-way tables, permutations and combinations as well as the binomial theorem.</p> <p>By utilizing individual student assessment results, the teacher will provide small group or remedial instruction to review essential questions/big ideas, key concepts and provide additional explanations, more examples, and to model procedures in finding the solutions to particular problems.</p> <p>Provide wait time to allow students to process orally presented information and questions relating to the unit.</p> <p>Access to word/picture banks to develop an understanding and use content-specific vocabulary.</p> <p>Allow for Student Choice: Students should be permitted to demonstrate understanding of content through illustrations, computer projects, oral response, creative presentations or demonstration, etc.</p> <p>Support comprehension of unknown vocabulary, by providing examples of Note-taking, highlighting, underlining, etc.</p> <p>Students should be given copies of grade level material or text so they can highlight or underline pertinent information.</p> <p>Text to speech/Oral reading if necessary</p> <p>Provide students with flexible seating options while working independently, depending on need or preference.</p> <p>Math-specific vocabulary and literary terms should be pre-taught before teaching relevant concepts.</p>
--	--	---

BOE APPROVAL: August 2018

		<p>Allow extra time to complete in class written assignments.</p> <p>Provide students with a sample problem or list of steps or procedures for multi-step solutions to problems. Allow student to reference these procedures when solving independently.</p> <p>Reduce the number of assigned problems within a unit.</p> <p>Provide models or templates to teach the structure of how to solve problems systematically.</p> <p>If necessary, provide additional set of materials or online access so that students can utilize resources at school and home.</p> <p>Provide study guide for students to review before Unit quizzes or tests.</p> <p>Review essential questions/big ideas of trigonometric functions, graphing sine and cosine functions, trigonometric identities, computing probabilities, using two-way tables, permutations and combinations and the binomial theorem to provide additional explanations, more examples, and to model procedures in finding the solutions to particular problems.</p> <p>Provide wait time to allow students to process orally presented information and questions relating to the unit.</p> <p>Modify tests to address big ideas/essential questions of the unit.</p>
