Support in
Identifying
Student Needs

Start Strong Assessment Overview

Start Strong Fall 2021 assessments:

- Produced information to be used as a standards-based complement to the resources used by educators in their classrooms to evaluate the needs of students.
- Were administered quickly, in person, and provided immediate results.
- As determined by the U.S. Department of Education, the administration of Start Strong satisfied federal statewide assessment requirements to administer general assessments in English language arts, mathematics, and science only for the 2020-2021 school year. The spring NJSLA schedule will resume for the 2021-2022 school year.

Start Strong Fall 2021 assessments do not:

- Replace local standards-based benchmark assessments districts may already have in place.
- Replace the spring 2022 New Jersey Student Learning Assessments (NJSLA) statewide summative assessments or are predictive of their results.

Start Strong Test Design

- Based on a **subset** of prioritized **prior-year** academic standards to provide a data point on the level of support a student may need to engage in grade-level content.
 - Example: Grade 5 ELA Start Strong assessment is aligned to a subset of the NJSLA for Grade 4 ELA.
 - Example: Algebra I Start Strong assessment is aligned to Grade 8 learning standards relevant to algebraic concepts.
- Used **released** high-quality items from the NJSLA item bank
- Contained efficient question types to produce on-demand results for educators
- Could be administered in 45–60 minutes

Note: The test design, which allowed for shortened testing time and immediate results, means that Start Strong results must be interpreted and used differently than NJSLA results. They do not cover the breadth and depth of standards as seen on the NJSLA and do not support the same comparisons or inferences about student proficiency.

Start Strong Grade And Content Alignment

Content Area	Grade/Course in SY 2021 - 2022	Content of the Assessment
English Language Arts (ELA)	<ul style="list-style-type: none"> • Grade 4 • Grade 5 • Grade 6 • Grade 7 • Grade 8 • Grade 9 • Grade 10 	<ul style="list-style-type: none"> • Grade 3 • Grade 4 • Grade 5 • Grade 6 • Grade 7 • Grade 8 • Grade 9
Mathematics	<ul style="list-style-type: none"> • Grade 4 • Grade 5 • Grade 6 • Grade 7 • Grade 8 • Algebra 1 • Geometry • Algebra 2 	<ul style="list-style-type: none"> • Grade 3 • Grade 4 • Grade 5 • Grade 6 • Grade 7 • Grade 8* • Grade 8* • Algebra 1
Science	<ul style="list-style-type: none"> • Grade 6 • Grade 9 • Grade 12 	<ul style="list-style-type: none"> • Grades 3–5 • Grades 6–8 • Grades 9–11

*Students beginning Algebra I, Geometry, and/or Algebra II in the 2021–2022 school year may have taken different mathematics courses depending on their individual course pathways. The Start Strong Assessments for Algebra I and Geometry are based on the Grade 8 learning standards and, therefore, measure some of the same concepts. The Start Strong Assessment for Algebra 1 contains more items from the Grade 8 learning standards relevant to algebraic concepts, and the Start Strong Assessment for Geometry contains more items from the Grade 8 learning standards relevant to geometry concepts.

Start Strong Result Interpretation Considerations

- When publicly reporting assessment results, consider the impacts of COVID-19 on learning and testing conditions, as well as the impact on student participation in the assessments, which were administered in person.
- Districts **should not** compare any individual student/school/district Start Strong data to any state-level data for Start Strong, nor should comparisons be made to any NJSLA data.
- Please note that the Start Strong assessments were **not** designed to predict future student performance on the NJSLA, nor was it designed to estimate what score a student would have received if they had taken the NJSLA in spring 2021.

Start Strong Result Interpretation Considerations, Continued

Start Strong assessments provide a data point to support:

- District-level curriculum planning and revisiting prerequisite concepts and skills
- Evaluating scope and sequence based on distribution of student support needs
- Providing professional learning supports for differentiation and scaffolding based on student results, aligned to principles and practices outlined in the [NJDOE Learning Acceleration Guide](#)
- Using the Individual Student Reports (ISRs) for conversations between parents and educators on where their child might need support at the beginning of the school year

District And School Context That Impacted Start Strong Data

- The Department encourages districts to clearly and prominently provide information about the context of Start Strong data, including its limitations as a result of the pandemic or other factors.
- The results should include clearly worded context that such data are incomplete and/or not representative of the make-up of the district or school population.
 - For example, if a district sees:
 - Low participation rates at a school as a result of school quarantine.
 - Skewed results at school/grade level as a result of large numbers of individual student quarantines.
- As always, assessment data should be analyzed alongside other important measures of student outcomes, like benchmark assessments, teacher-created formative assessments, and attendance data to provide a more complete perspective on resources, support, and student success.

Start Strong Narrative

- As expected, ELA scores were considerably higher than math or science. In discussions prior to the release of Start Strong results we surmised that the scores would turn out exactly as they did, mostly due to the fact that reading skills suffered less during remote and hybrid instruction than math or science: students were still required to read constantly while using Google Classroom, and practice is practice. State overall results indicated the same: math and science were indeed lower than ELA.
- Cliffside Park's Start Strong scores compared very favorably with the scores shown on the as-of-yet officially unreleased state numbers found in the NJDOE site [here](#). Cliffside Park students were nearly identical to the overall NJ student population in ELA and math, and were 7% off from the achievement numbers of the state in science. There is a lot of work to do, but it is encouraging that our students are keeping up with the general population.
- As an additional metric, the Start Strong scores were a welcome addition to our data pool. However, the reality is that they arrived too late to truly be a primary guidance for our instruction. The revelation that the scores provided was that the majority of our students were behind, but this is something that was already painfully obvious to our teachers and administration. Instead, we determined that to make good use of the data provided by Start Strong we needed to utilize it as a metric in a type of comparative matrix.

Intervention Strategies

As with all school districts across the country, Cliffside Park was heavily affected by the continuing global pandemic. By far the most impactful change was the remote and hybrid nature of the past two years, which unfortunately led to a dearth of concrete, actionable data for our school district to use.

Upon returning to full in-person learning at the start of this year, we were determined to find a tool to diagnose our students quickly, broadly, and effectively. As a district we have settled on utilizing the IXL platform as our primary method of student advancement tracking. We utilize the data provided from the IXL platform as one of our multiple measures to gauge student learning. We feel comfortable with the results from IXL primarily based on the fact that the initial IXL diagnostic given to our students tracked very closely with the results from the Start Strong Assessment. It was important for us to be able to show that the data corresponded closely, because if the state DOE feels the Start Strong assessment is valid, then correlation in this case justifies the use of the IXL platform as a diagnostic tool.

Intervention Strategies

- We are utilizing the IXL Diagnostic tool, an interim assessment designed to provide real-time, up to the minute data on student performance and growth. With this tool we are able to easily see where students are excelling and where they may need some help. The diagnostic takes a lot of the difficult work of gauging growth out of the teachers' hands and provides clear, concise, actionable data.
- We have eliminated a lot of additional tools that were put in place during remote learning. We felt that practice time in math was being diluted by an excess of platforms. We are focused on using less resources more effectively.
- In ELA we have implemented the Fountas and Pinnell Leveled Literacy Intervention (LLI) System to help our most needy students. The program is an intensive supplementary literacy intervention, with a focus on quick and permanent growth, that will allow students to exit the program in 18 weeks. This is an attempt to move away from the permanent Title I "lifers" of the past.
